

# FIRST PHASE REPORT!

Proud Cockroaches team  
25/06/2021

# WHOA!

6 days have passed. Congratulations, you have a day off :>

Take a look at our plan, what we've done so far and the problems to tackle in the next phase.

# FULL EXPECTED TIMELINE

We did nothing :)))

- Mathematical models try-out & data visualization
- Start focusing on answering the questions of this problem

25/06 – 26/06:  
day off

26/06 –  
01/07

01/07 – 02/07:  
day off

02/07 –  
07/07

and the last 3 days  
is, you know, for  
ambulance  
situations....

Note: I assume that  
everyday starts at noon;  
that's why I denoted the  
day off as: (noon of)  
25/06 to (noon of)  
26/06. Thus, that is 1  
day, not 2 days :P

- Discuss the overall path;
- First baby steps to get used to the process

- Get to finish the whole project
- Prepare all documents and the final report file

# WHAT WE'VE DONE SO FAR

## FOUND THE PATH FOR THIS ASSIGNMENT

Ever wondered why we did nothing in the first 20 days? Because of this!!!! We need a path to follow, and luckily, we found it (presented in the first ever team meeting).

## DATA CLEANING

Check, then filter the required entries, make separate datasets for every country... A whole bunch of time went into that process!

## LEARN TO USE GOOGLE COLAB

What an amazing toolset for developing in Python language.

## LEARN TO USE PYTHON ML SYNTAXES

Though not so many and mostly copied from the Internet, I'm still proud of it. You can, too.

## RETRIEVE THE DATA

Need to dig through "every corner of the Internet", LOL. Just kidding, but honestly it was time-consuming and really confused.

## LEARN TO USE SPSS

Only the basics, but useful enough.

## LEARN ABOUT "MODEL EVALUATION METRICS"

RMS, MSE, RMSE, MAE, MAPE, RMSLE (???) Mind blown....

# APPROXIMATE DONE PERCENTAGES

## DATA

We still have some more criteria to add to the dataset, and visualization step.

## MODEL

So far, all the things we know about forecasting models are limited.  
Need more work.

# CURRENT PROBLEMS/LACKINGS

## 1. NOT YET DECIDING WHAT WE WANT TO PREDICT

What a shame :<

## 2. NOT YET HAVING A QUESTION SET

We need a set of questions to build visualizations and models based on it.

## 3. NOT YET DECIDING WHICH OTHER CRITERIA TO CALCULATE OTHER THAN CONFIRMED, DEATH AND RECOVERED

Yep. You read the title.

## 4. NOT YET UNDERSTANDING PYTHON MODELS SYNTAXES

Though we mostly know nothing about Python, I think it is quite easy to catch up. For this project, you don't need to study Python from scratch. The syntaxes are quite understandable.

# THE NEXT PHASE:

## 26/06 – 01/07

In this phase, we need to tackle the remaining problems in the previous slide, and of course, conquer new challenges!

THANKS LMAO
